

Simple Weather App

- A basic weather application that lets you search for current weather conditions by city name. It uses the OpenWeather API to fetch live weather data.

##Screenshots

##Features

- Search weather by city
- Shows current temperature (°C)
- Displays weather description
- Basic error handling for empty input and invalid city
- Simple and responsive design

How to Use

1. Get a free API key from [OpenWeather](https://openweathermap.org/api).
2. Replace the `apiKey` value in `script.js` with your API key.
3. Open `index.html` in your web browser.
4. Enter a city name and click "Get Weather" to see the results.

Technologies

- HTML
- CSS
- JavaScript
- OpenWeather API
